Fireworks, BBQ's and sprinklers, summer in Washington, DC is here and it's not going anywhere. With temperatures hitting 100 degrees, it's time to close the windows and crank up the AC. Many homes today have central AC or individual units but split-ductless HVAC units are on the rise.

Ductless air conditioning has been popular in Europe and Asia for years, but the systems are slowly gaining momentum in the U.S. mainly due to the fact that many of the systems on the market today are ENERGY STAR®- rated and available for tax credits.

At Georgetown Development, we are committed to proving our customers with home solutions that are sustainable, environmentally friendly and provide your home with an appealing aesthetic.

Many of the residential systems in the market today are designed to be incorporated into your home, rather than obstruct a room's intended design. There are a number of systems on the market from [Mitsubishi Electric](#) , [LG](#) , [Samsung](#) and [Sanyo](#) .

Whether you're working on a home renovation, room conversion or a new luxury home design, Georgetown Development is here to help. To learn more about Georgetown Development, please visit us at [www.georgetowndevcorp.com](http://www.georgetowndevcorp.com)
