---

There you are, driving down the street in Bethesda, MD or McLean, VA and you see one home that just looks a little out of place, something is different, but you can't quite put your finger on what it is. What makes that home look different? Solar panels on the roof!

More and more homes today are having solar panels installed and the government is finally taking notice. The growing demand for solar panels on residential homes has forced Congress to look into a climate legislation that includes a provision that, if passed, could make it financially more feasible for solar system suppliers and their business partners—including builders—to extend lower-cost leasing options to homeowners. Click [here](#) to read all about it.

At Georgetown Development, we are committed to providing our clients with the latest in sustainable home design. From using recycled products to helping you with a luxury home design that's also energy-efficient. To learn more about our commitment to sustainability and environmentally conscious design, please visit us at [www.georgetowndevcorp.com](http://www.georgetowndevcorp.com).

Happy Building!
